

A paper about $z \simeq 6$ quasars

About $z \simeq 6$ quasars

This is a paper about $z \simeq 6$ quasars. These are $z \neq 0$ quasars. Throughout the paper, we adopt a Λ CDM cosmology with $H_0 = 67 \text{ km s}^{-1} \text{ Mpc}^{-1}$, $\Omega_M = 0.3$, and $\Omega_\Lambda = 0.7$ (Planck Collaboration et al. 2014). Unless otherwise stated, all magnitudes are on the AB system (Oke & Gunn 1983) and have been corrected for Galactic extinction using the reddening map of (Schlafly & Finkbeiner 2011).
